

Proposal of Project 3: Sequence Tagging

Shibo Zang(sz428) Hongfei Li(hl963)

Brief Description of Baseline System

We used a brute force method to implement the baseline system.

Firstly, we recorded all occurrences of named entities during training phase.

Secondly, during testing phase, all occurrences of all named entities and their indexes are recognized and recorded in a dictionary.

Finally, the recorded results are written to `solution.txt`

Detailed description of our baseline system are recorded in file `baseline.py`
